

eCo Universal Angle Bracket

MiTek® Industries SA (Pty) Ltd., leaders in roof truss technology, introduces the innovative **eCo Universal Angle Bracket**.

The **eCo Universal Angle Bracket** is designed for the connection of small jack trusses to hip girders in roof structures. The application of the bracket is simple as there are no tight corner angles. This allows easy installation and hammering of **eCo Permfix** nails for a secure connection.

The load capacity is up to 2 kN or equivalent to a 2,25m span jack truss with concrete tile loading. The **eCo Universal Angle Bracket** is more economical to use than regular angled brackets and carries the **MiTek stamp of approval!**

In addition the **eCo Universal Angle Bracket** has the following benefits:

- Specifically designed for jack truss connection,
- Flexible angle capabilities, ranging from 30° to 60°,
- Ease of application as there is no tight corner nailing,
- Embossed design for extra stiffening properties,
- Galvanised steel for corrosion resistance,
- **MiTek tested & approved!**

creating the advantage in eCo Fasteners
